- G. All stainless steel joints to be pop reverted or self tapped together
- H. Ensure that the vented ring is fitted to the first length of decorative Flue

## IMPORTANT INFORMATION

1. A permit from your local council must be obtained prior to installing your heater.
2. In most normal installations, a triple skin flue should be used where installation is in close proximity to combustible materials, eg. where the flue kit above the ceiling continues through another storey or if the flue kit is within a cupboard or similar space, rather than a ceiling, consult your dealer.
3. Correct installation is the responsibility of the licenced plumber installing the flue kit. NOT the manufacturer of the kit.
4. Regular inspection of your flue for creosote deposit or damage, and cleaning with a flue brush will ensure continuing good surface.
5. The cowl is to be attached with 2 self tapping screws, and can be removed for cleaning.
6. This Flue Kit is manufactured in accordance with AS/NZS 2918:2018, Heater specific requirements, clearances and flue termination is the responsibility of the licenced Installer.
7. **A Certificate of Compliance must be issued by the installing plumber for Council and Insurance purposes.**

Decorative flue patterns consist of :-

- Slotted
- Herringbone
- Club & Round or
- Solid Casing
